
AGRON
DEFENSE
Earlier warning. More time to decide.
Detection, surveillance, and unmanned systems that see threats
sooner and bring every sensor into one operating picture.

Too many pictures. Not enough time.

Separate screens, separate clocks, separate operators. Delay between sensors means little time to react.

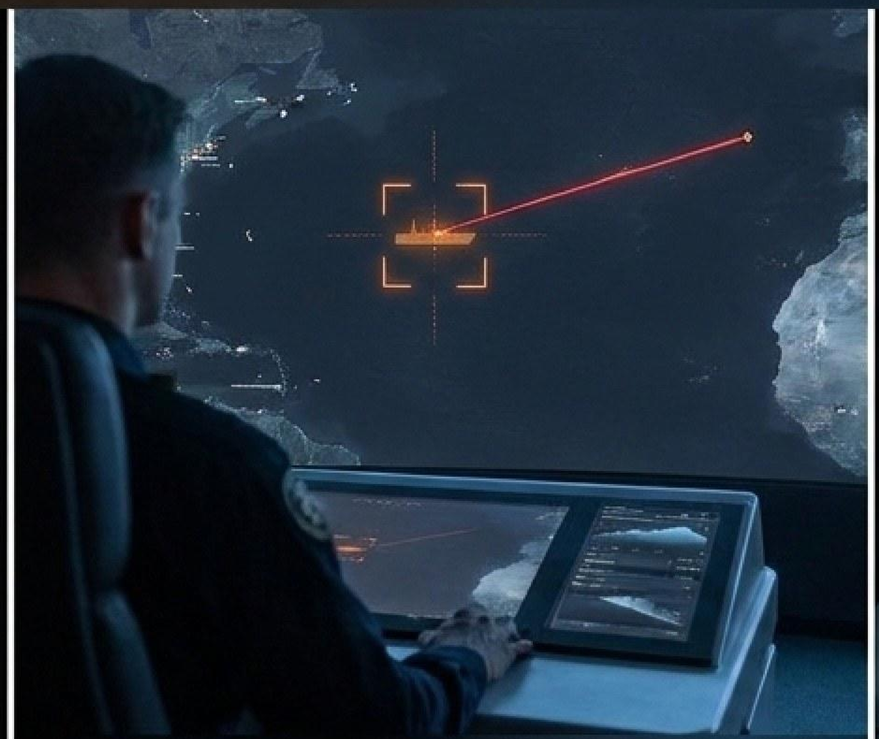

AGRON integrated picture. The window between first detection and the moment of decision grows instead of shrinking.

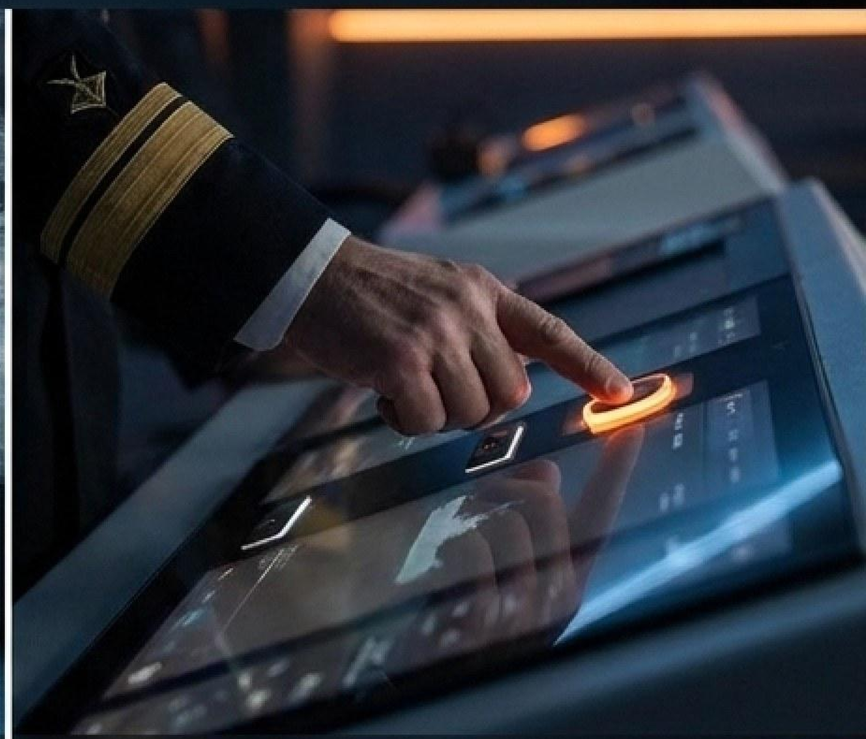

In a crisis, the side that closes the decision cycle first wins.

01 See: One picture from radar, cameras, acoustics, and radio intelligence.

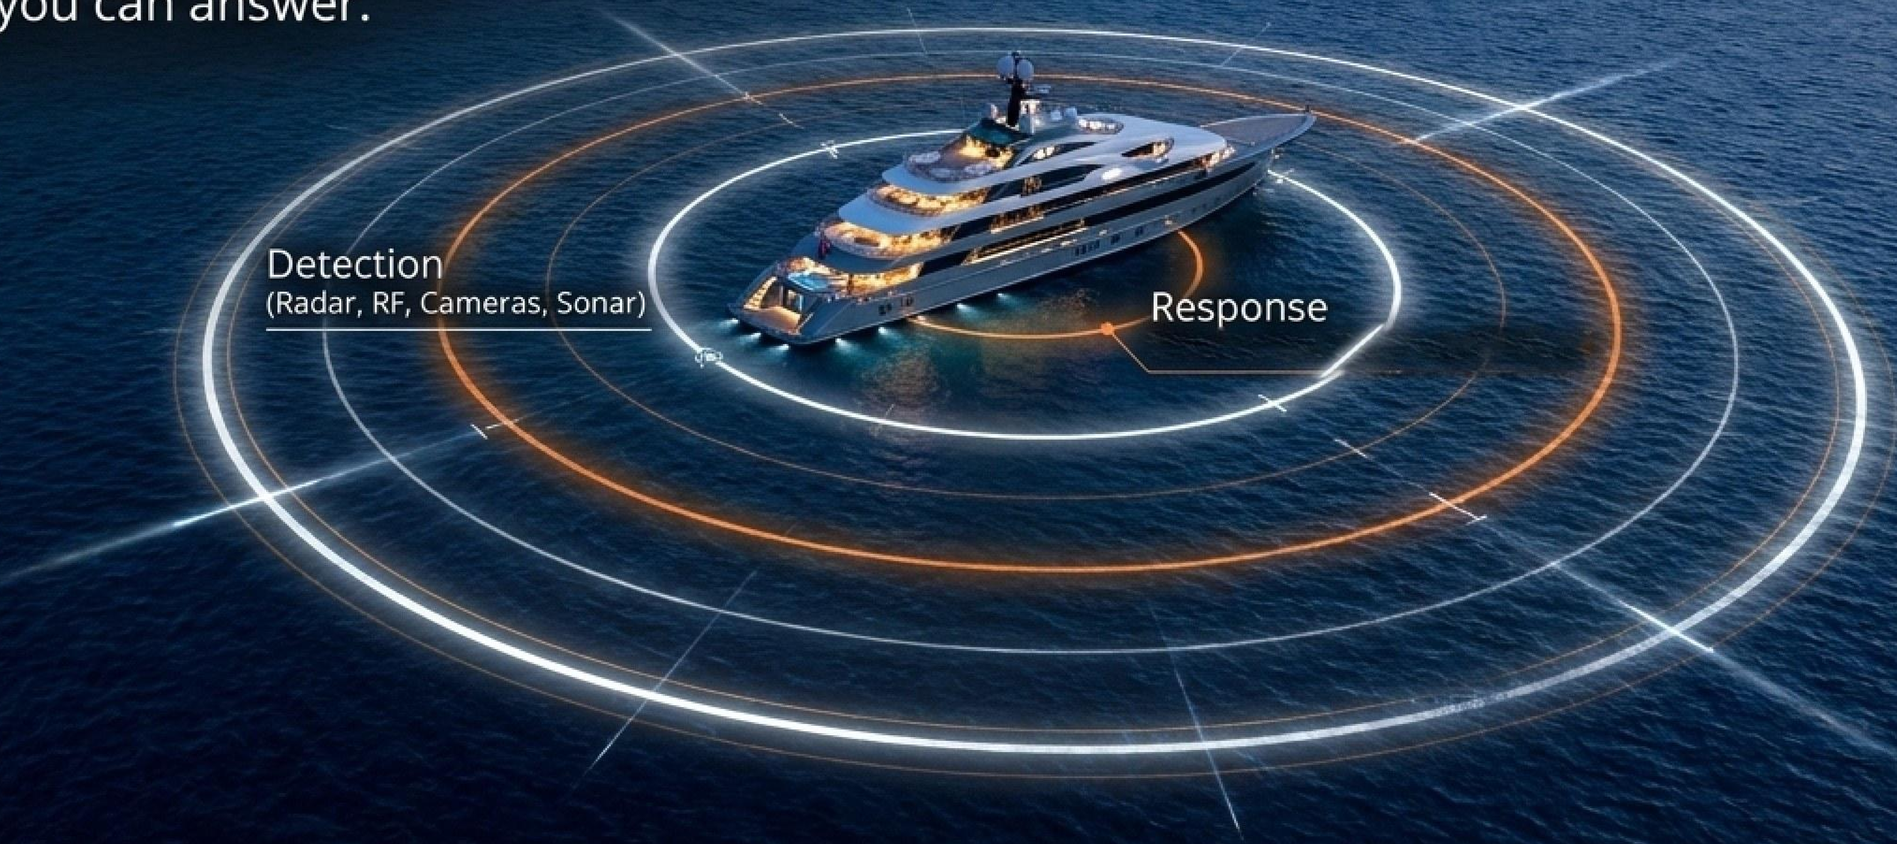

02 Understand: Correlate feeds, name the threat, project the next leg.

03 Act: The watch authorizes. StarDome executes the response playbook.

Push the first contact out to the edge of the protected area.

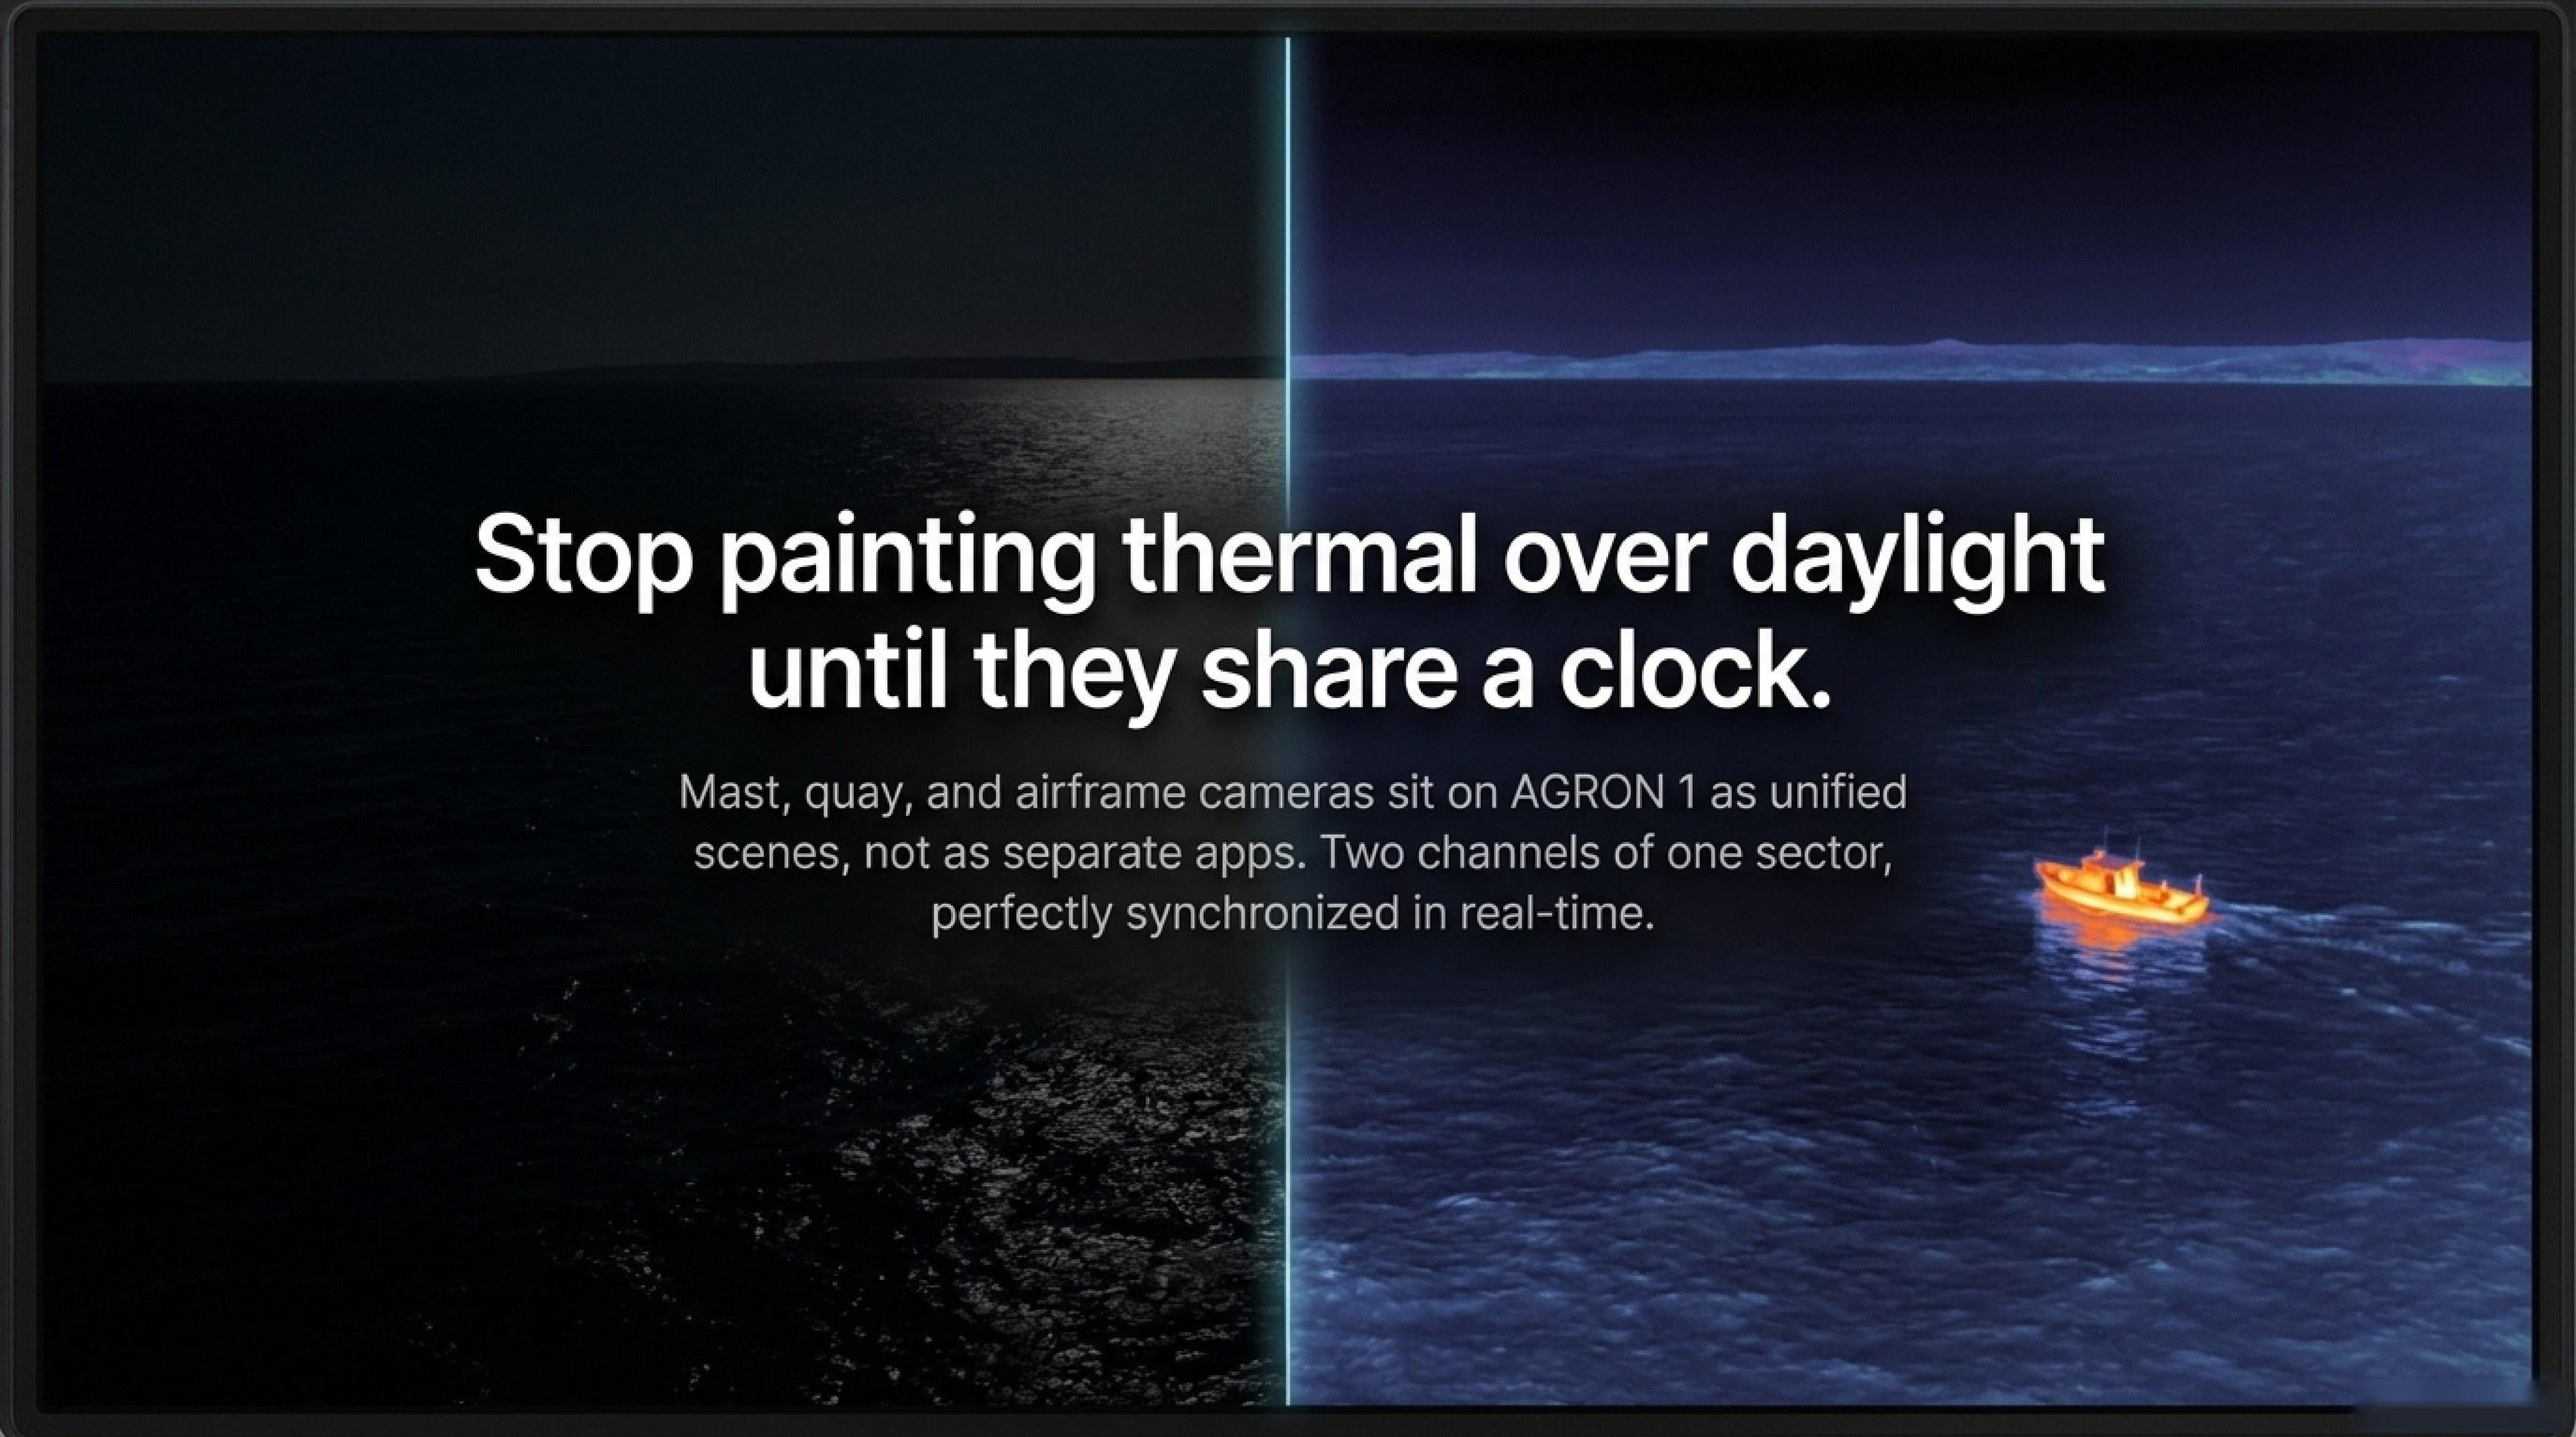

The yacht is the watch. AGRON envelopes
map exactly how far you can see,
and how far you can answer.

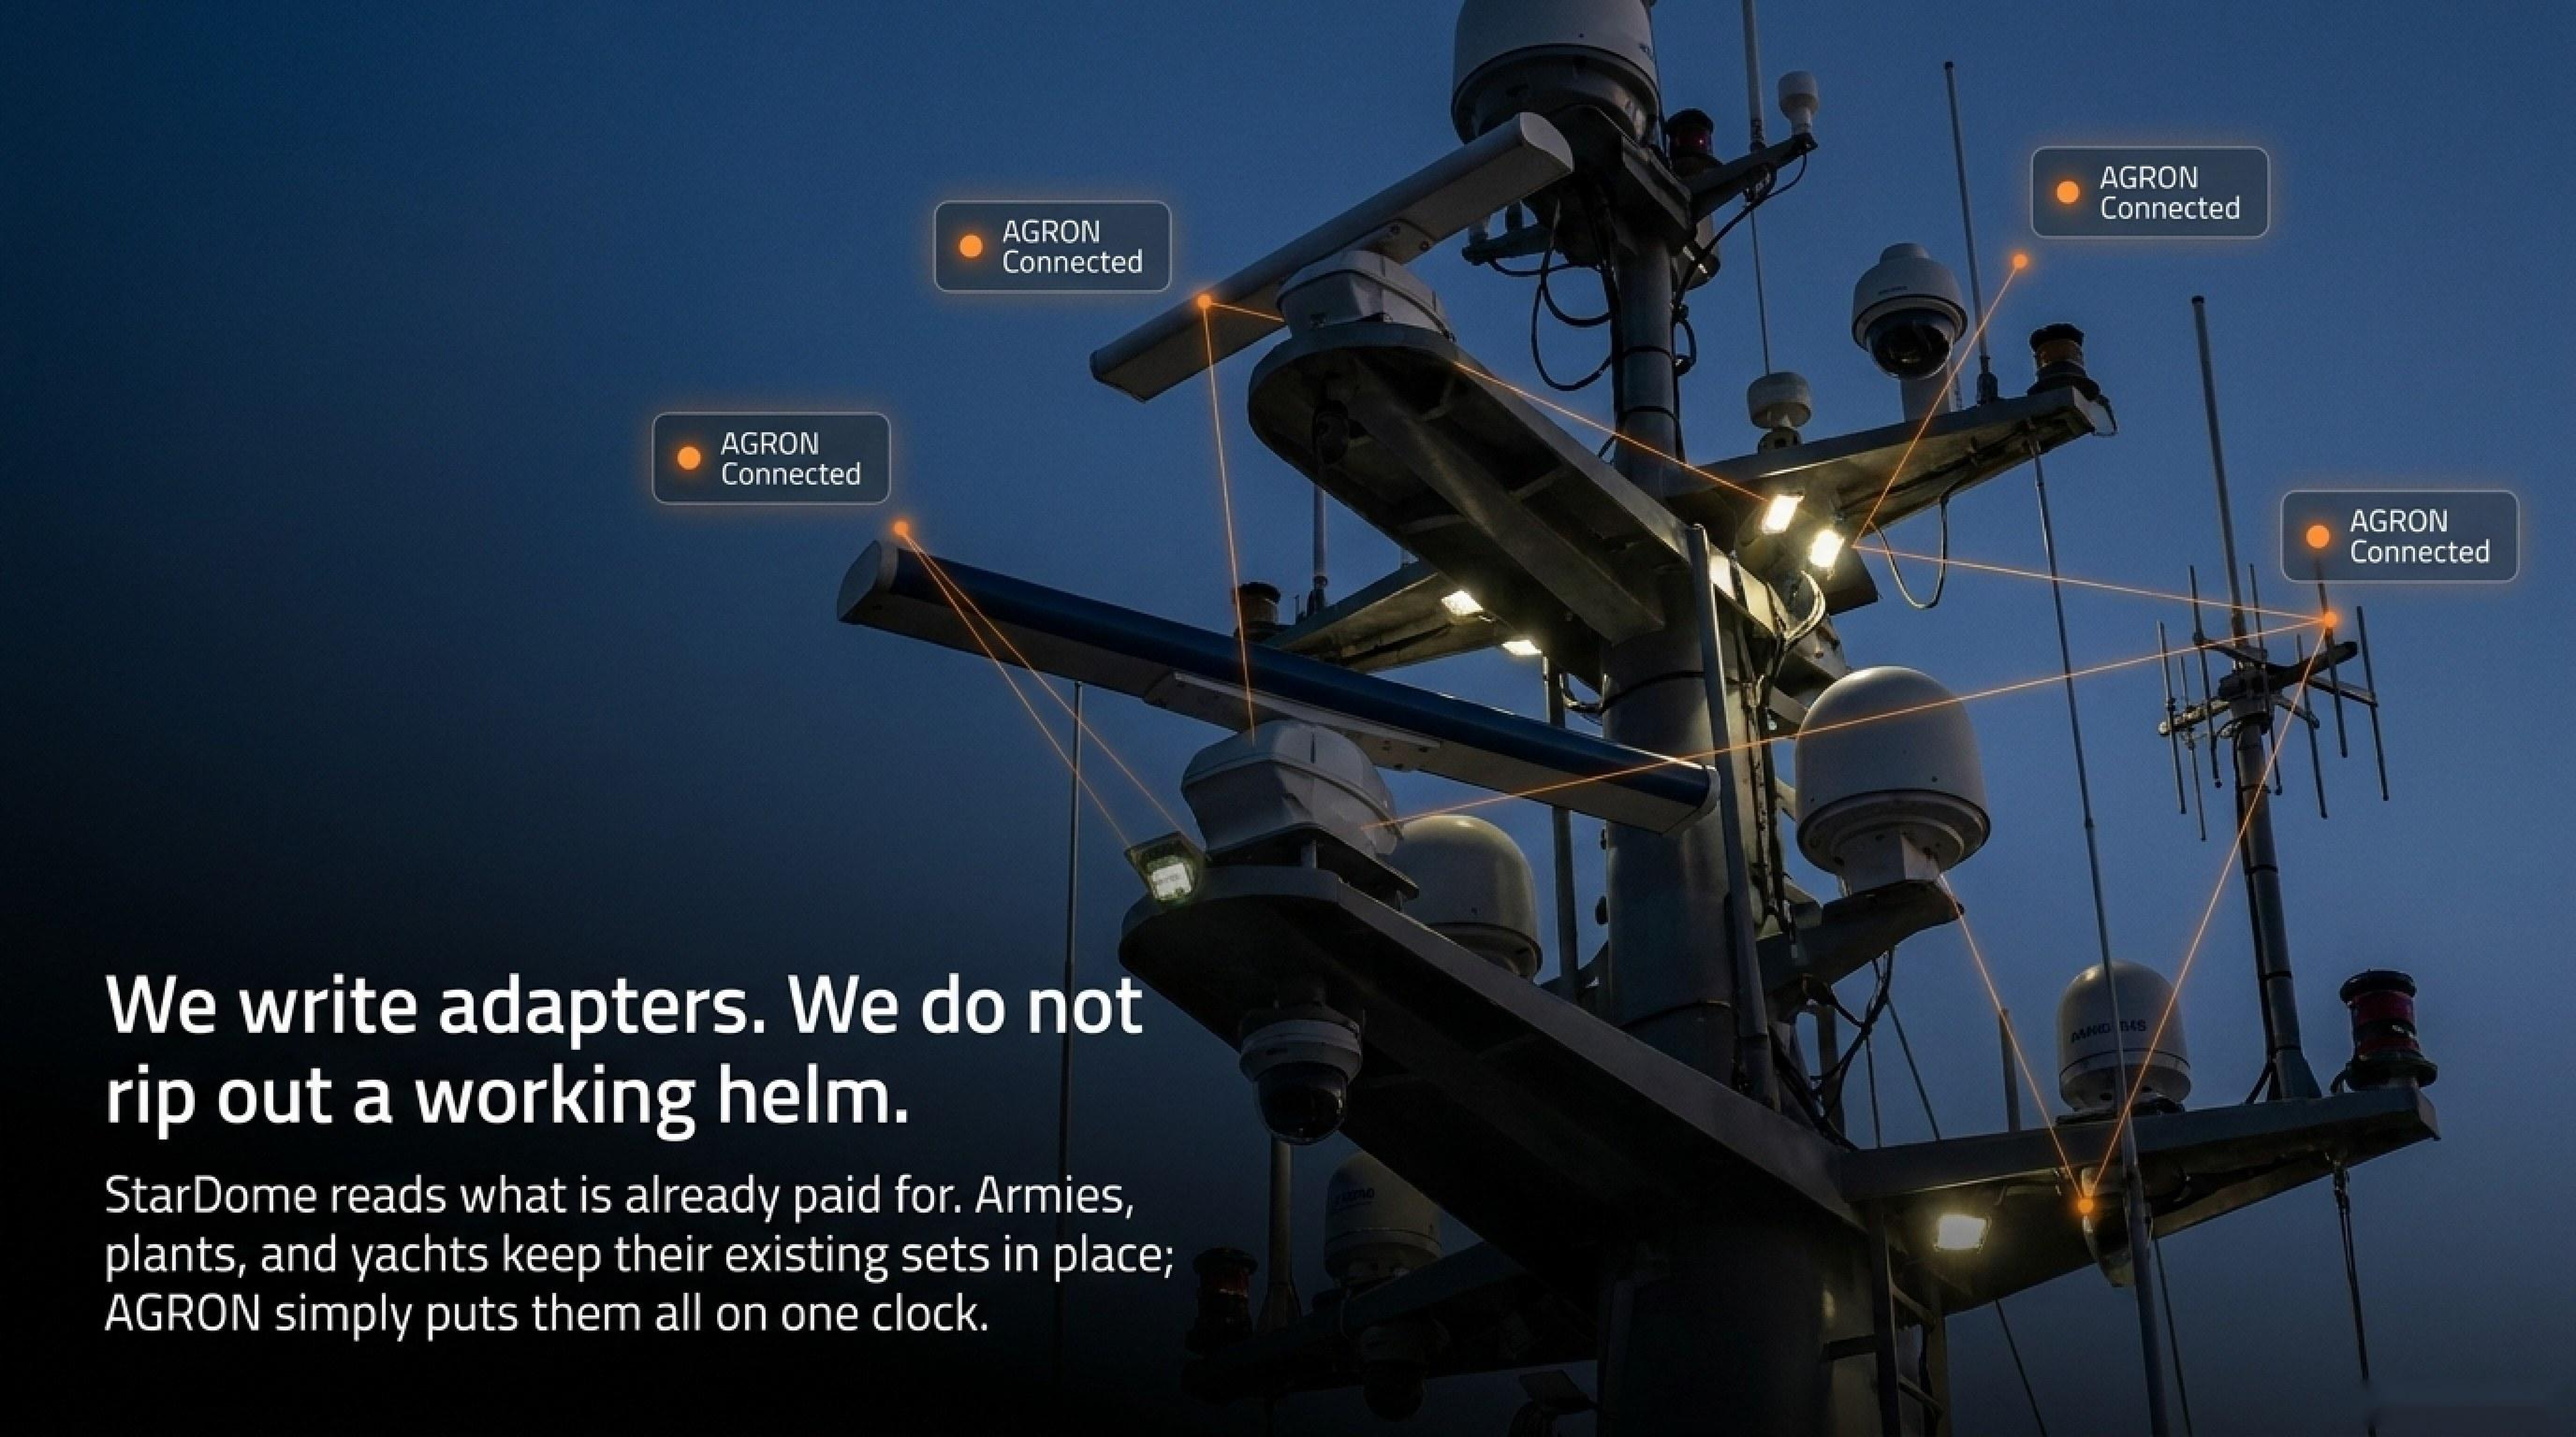

Fusion turns many contacts into a single intelligent track.

When the risk level changes, the reason sits right next to it.
AI Pilot prepares the options based on the exact threat level.

Stop painting thermal over daylight until they share a clock.
Mast, quay, and airframe cameras sit on AGRON 1 as unified scenes, not as separate apps. Two channels of one sector, perfectly synchronized in real-time.

We write adapters. We do not rip out a working helm.

StarDome reads what is already paid for. Armies, plants, and yachts keep their existing sets in place; AGRON simply puts them all on one clock.

The steel box, and the StarDome system inside.

One watch for every environment.

From a 20 ft container on a quay to a compact shelter on deck, every unit runs the exact same picture. Harbor, Coastal, Passage, or Ocean plans.

Coastline

The watch is still run by a person. The screens should stop arguing with each other.

StarDome correlates the feeds, names the threat, and recommends the next step. AI Pilot prepares the options. A person authorizes every action.

The working watch is inside.
AGRON 1 and StarDome tools open only after access is granted under a written agreement. Nobody signs themselves up.
Request access to the watch.
